## PROJECTS

- **CRUD (Create, Read, Update, Delete): -**  
**Project description:** React project is a web application that allows users to perform basic data operations: creating, reading, updating, and deleting records. Key features include list and detail views, create and edit forms, and a way to delete records. The project typically involves React for the front-end, a backend for data storage and retrieval, and can include user authentication and responsive design.
- **Weather Forecasting Web page Project: -**  
**Project description:** It will Show the weather for next 5 days of particular state of India which is given as input. In this project I create a user-friendly user interface. Fully functional and completely responsive website compatible with all kinds of screen resolution devices. For this the technologies I used are Html, CSS, and Java Script.
- **Data Structure project with the using of java Swings: -**  
**Project Description:** The project involved implementing data structures like Array, Queue, Circular Queue, Stack, Doubly Linked List, Singly Link List linked lists, stacks, and queues using Java Swing GUI toolkit. Efficient algorithms were designed and integrated with Swing components to create a user-friendly graphical interface for interacting with data structures. Testing was conducted to ensure functionality and performance. Technologies Used: Java, Swing (Java GUI toolkit).
